Profile Summary

I'm a Data Science student at Bina Nusantara University and Deep Learning researcher with a proven track record in international conferences. Experienced in optimizing Large Language Model (LLM) logic and medical image detection using CNN architectures. Passionate about bridging the gap between advanced academic research and scalable software engineering solutions.

Education

Bina Nusantara University

Bachelor's Degree in Data Science (Ongoing)

Experience

Abaka | Los Angeles, USA (Remote)

AI Trainer | 2025 – Present

- Performing high-quality annotation and evaluation of AI-generated visual content, ensuring alignment with complex project guidelines and quality standards.
- Validating the accuracy and composition of synthetic images to improve generative model performance across multiple modalities.
- Collaborating in a professional, remote environment to refine model outputs through detailed feedback and systematic quality analysis.
- Maintaining high efficiency and accuracy rates while adhering to strict data privacy and security protocols.

BINUS IT Division | Jakarta, Indonesia

Full Stack Programmer | March 2026 – Present

- Developed and implemented new features for the BINUS Online platform based on technical specifications from System Analysts.
- Maintained and optimized existing web applications by troubleshooting bugs and improving system functionality.

- Integrated backend services with various APIs to ensure seamless data communication and platform stability.
- Managed and accessed SQL databases to perform data-related tasks and support application requirements.
- Built and refined frontend components using ReactJS to enhance the user interface and meet user requirements.

Appen | Chatswood, Australia (Remote)

AI Content Reviewer | 2025 – March 2026

- Reviewed video and audio data to ensure they met the quality standards for AI training.
- Re-checked object detection and speaker alignment to maintain data accuracy.
- Provided feedback on data errors and inconsistencies based on project guidelines.

Project.co.id | Bandung, Indonesia (Remote)

Freelancer | June 2025 – November 2025

- Input and verify large volumes of data using Excel and Google Sheets.
- Ensure accuracy, consistency, and proper formatting according to the provided templates.
- Conduct basic research to validate product or vendor information.

Activist – Education & Development Research Division, Data Science Club (DSC), BINUS University

2024 – Present

- Conducted research and development projects related to data science education and learning tools.
- Contributed to internal workshops and tutorials on basic machine learning and data analysis.
- Supported event operations during *Week of Welcoming (WoW)* to promote the club to new students.

Research Contributor – Academic Projects

2024 – 2025

- Co-authored and contributed to two academic research papers:

- *“Enhanced Cervical Cancer Cell Detection Using CNN Transfer Learning with Strategic Layer Freezing.”*
- *“Weather Prediction Based on Temperature and Humidity Using AI.”*

Handled data preprocessing, exploratory data analysis, and data visualization using **Python** and **R**.

Projects

Vehicle Inventory Web Application

- Developed a full-stack application using ReactJS for the frontend and complex SQL integration for the backend.
- Implemented real-time vehicle inventory tracking and transaction management features.

Corn Leaf Disease Identification (Multiclass Classification)

- Developed a Deep Learning model using CNN architectures (AlexNet and MobileNetV2) to identify various diseases in corn leaf images.
- Optimized model performance and accuracy through custom training pipelines and image preprocessing techniques.

Crop Yield Prediction System

- Built a predictive system using Artificial Neural Networks (ANN) and regression techniques to analyze agricultural datasets.
- Processed complex agricultural features to forecast crop yields with high precision.

Loan Status Classification System

- Developed a predictive model to classify loan approval status using ensemble learning techniques.
 - Implemented and compared the performance of Random Forest and XGBoost algorithms to achieve the highest prediction accuracy.
 - Handled complex financial datasets, focusing on feature engineering and handling imbalanced data for better model reliability.
-

Certification

NVIDIA Deep Learning Institute (DLI) – Fundamentals of Deep Learning

NVIDIA Deep Learning Institute (DLI) – Efficient Large Language Model (LLM)

Customization

Technical Skills

- Programming & Frameworks: Python, SQL, C#, JavaScript (ReactJS), R.
- AI & Data: Deep Learning (CNN), LLM Training (RLHF), Predictive Analytics, Data Modelling, ETL Processes.
- Tools: Microsoft Excel, Google Sheets, SQL Server, Notion, Git, Canva.

Language

Indonesian (Native), English (Professional), Japanese & Mandarin (Conversational).
