Education

Bina Nusantara University Undergraduate, Data Science. GPA 3.75	Jakarta, Indonesia 2024 - Present
SMAK 2 BPK Penabur Jakarta Natural Science, High School	Jakarta, Indonesia Jul 2021 - Jun 2024

Work Experience

BINUS IT Division Associate Member Programmer - Develop and implement new features for internal BINUS systems using ReactJS, HTML, and CSS3, based on technical specifications from System Analysts. - Maintain and optimize existing web applications by troubleshooting bugs and improving system functionality. - Integrate backend services with various APIs and manage data using SQL databases.	Jakarta, Indonesia Mar 2026 - Present
Data Annotation Independent Contractor - Annotate and label data used to train and evaluate AI models, following detailed project guidelines and quality standards. - Review and validate AI-generated outputs, giving structured feedback to help improve model accuracy and reliability. - Work across different data types and project guidelines while maintaining consistency and attention to detail.	New York, USA (Remote) May 2025 - Present
Appen AI Content Reviewer - Evaluated audio, video, and computer vision data, including object detection and speaker alignment, for AI model quality control. - Reported data errors and inconsistencies according to project guidelines.	Sydney, Australia (Remote) Jan 2025 - Mar 2026
Project.co.id Data Quality Analyst - Cleaned and verified large datasets in Excel and Google Sheets, keeping formats consistent with provided templates. - Researched product and vendor information to validate data accuracy.	Bandung, Indonesia (Remote) Jun 2025 - Nov 2025

Organizational Experience

Data Science Club (DSC), BINUS University Education & Development Activist (Research Division) - Co-authored and presented an academic research paper on deep learning application at ICORIS 2025 (IEEE Indonesia Section). - Designed and delivered hands-on Python data visualization modules for 10th-grade students at Sekolah Tarsisius 2. - Coordinated event operations and technical preparation for an NVIDIA-affiliated machine learning workshop for club members. - Managed the DSC registration booth during Week of Welcoming, successfully onboarding 100+ new freshmen as active members. - Handled logistics, venue sourcing, and fundraising strategies for Outventure while completing LDKCP leadership training camp.	Jakarta, Indonesia Mar 2025 - Present
First Year Program, BINUS University Freshman Partner - Facilitated weekly mentoring sessions to monitor academic adaptation, social integration, and overall well-being of newly enrolled Data Science freshmen. - Served as the main point of contact for freshmen to address academic hurdles, university system navigation, and campus life adjustments. - Acted as a liaison between first-year students and university resources to ensure a smooth transition into campus life.	Jakarta, Indonesia Aug 2025 - Jul 2026

Honors & Awards

- Co-Author, ICORIS 2025 (7th International Conference on Cybernetics and Intelligent Systems)** Sep 2025
- Published paper: "Enhanced Cervical Cancer Cell Detection Using CNN Transfer Learning with Strategic Layer Freezing", Universitas Bumigora, Indonesia.
- International Business Case Competition (IBCC) Semifinalist, SXC International Summit 2025** Nov 2025
-

Projects

Cervical Cancer Cell Classification (ICORIS 2025)

Link: [GitHub](#)

- Compared four CNN architectures with strategic layer freezing on the SIPaKMeD dataset; fine-tuned ResNet50V2 reached an F1-score of 0.915.
- Published in the ICORIS 2025 conference proceedings.

Credit Score Prediction (MLOps)

Link: [GitHub](#)

- Built an end-to-end scikit-learn/XGBoost machine learning pipeline tracked with MLflow to predict customer credit score categories.
- Deployed the solution through an interactive local Streamlit dashboard and a cloud-based API served via AWS SageMaker.

Jakarta Air Quality (ISPU) Forecasting

Link: [GitHub](#)

- Forecasted Jakarta's air quality index per monitoring station using lag/rolling pollutant features and an XGBoost regressor, achieving RMSE as low as 4.5 (CO) and 6.5 (SO2), with PM2.5 as the hardest pollutant to predict (RMSE 20.1).
 - Evaluated forecast quality with a classification report across air quality categories, reaching a 0.79 F1-score for the dominant "SEDANG" category, and used the results to pinpoint underrepresented categories needing further tuning.
-

Skills

Programming Languages: Python, R, C#, ReactJS, HTML, CSS3, SQL, PySpark

Technical Skills: Machine Learning, Deep Learning, Predictive Modeling, Time Series Forecasting, MLOps, NLP, Data Annotation, Exploratory Data Analysis, Data Visualization

Languages: Indonesian (Native), English (C1, IELTS 7.0)
